

## **Flight Safety Foundation**

## **CFIT Checklist**

## **Evaluate the Risk and Take Action**

Flight Safety Foundation (FSF) designed this controlled-flight-into-terrain (CFIT) risk-assessment safety tool as part of its international program to reduce CFIT accidents, which present the greatest risks to aircraft, crews and passengers. The FSF CFIT Checklist is likely to undergo further developments, but the Foundation believes that the checklist is sufficiently developed to warrant distribution to the worldwide aviation community.

Use the checklist to evaluate specific flight operations and to enhance pilot awareness of the CFIT risk. The checklist is divided into three parts. In each part, numerical values are assigned to a variety of factors that the pilot/operator will use to score his/her own situation and to calculate a numerical total.

In *Part I: CFIT Risk Assessment*, the level of CFIT risk is calculated for each flight, sector or leg. In *Part II: CFIT Risk-reduction Factors*, Company Culture, Flight Standards, Hazard Awareness and Training, and Aircraft Equipment are factors, which are calculated in separate sections. In *Part III: Your CFIT Risk*, the totals of the four sections in *Part II* are combined into a single value (a positive number) and compared with the total (a negative number) in *Part I: CFIT Risk Assessment* to determine your CFIT Risk Score. To score the checklist, use a nonpermanent marker (do not use a ballpoint pen or pencil) and erase with a soft cloth.

## Part I: CFIT Risk Assessment

Section 1 – Destination CFIT Risk Factors	Value	Score
Airport and Approach Control Capabilities:		
ATC approach radar with MSAWS	0	
ATC minimum radar vectoring charts	0	
ATC radar only	10	
ATC radar coverage limited by terrain masking	15	
No radar coverage available (out of service/not installed)	30	
No ATC service	30	
Expected Approach:		
Airport located in or near mountainous terrain	20	
ILS		
VOR/DME	15	
Nonprecision approach with the approach slope from the FAF to		
the airport TD shallower than 2 <sup>3</sup> / <sub>4</sub> degrees	20	
NDB	30	
Visual night "black-hole" approach	30	
Runway Lighting:		
Complete approach lighting system	0	
Limited lighting system		
Controller/Pilot Language Skills:		
Controllers and pilots speak different primary languages	20	
Controllers' spoken English or ICAO phraseology poor		
Pilots' spoken English poor		
Departure:		
No published departure procedure	10	
Destination CFIT Risk Factor	ors Total (-	-)

Destination CFTT Risk Factors Total (-

Section 2 – Risk Multiplier	Value	Score
Your Company's Type of Operation (select only one value):	varue	Beore

Section 2 – Flight Standards		
	Value	Score
Specific procedures are written for:		
Reviewing approach or departure procedures charts		
Reviewing significant terrain along intended approach or departure course		
Maximizing the use of ATC radar monitoring		
Ensuring pilot(s) understand that ATC is using radar or radar coverage exists		
Altitude changes		
Ensuring checklist is complete before initiation of approach		
Abbreviated checklist for missed approach		
Briefing and observing MSA circles on approach charts as part of plate review	10	
Checking crossing altitudes at IAF positions	10	
Checking crossing altitudes at FAF and glideslope centering	10	
Independent verification by PNF of minimum altitude during		
stepdown DME (VOR/DME or LOC/DME) approach	20	
Requiring approach/departure procedure charts with terrain	-	
in color, shaded contour formats	20	
Radio-altitude setting and light-aural (below MDA) for backup on approach		
Independent charts for both pilots, with adequate lighting and holders		
Use of 500-foot altitude call and other enhanced procedures for NPA		
*	10	
Ensuring a sterile (free from distraction) cockpit, especially during	10	
IMC/night approach or departure	10	
Crew rest, duty times and other considerations especially	20	
for multiple-time-zone operation		
Periodic third-party or independent audit of procedures	10	
Route and familiarization checks for new pilots		
Domestic		
International	20	
Airport familiarization aids, such as audiovisual aids	10	
First officer to fly night or IMC approaches and the captain to		
monitor the approach	20	
Jump-seat pilot (or engineer or mechanic) to help monitor terrain clearance		
and the approach in IMC or night conditions	20	
Insisting that you fly the way that you train	25	
300-335 points Tops in CFIT flight standards		
270-300 points Good, but not the best Flight Stands	ards Total (-	+) *
200-270 points Improvement needed Less than 200 High CFIT risk		
Less than 200 Tright Criti fisk		
Section 3 – Hazard Awareness and Training		
	Value	Score
Your company reviews training with the training department or training contractor	10	
Your company's pilots are reviewed annually about the following:		
Flight standards operating procedures	20	
Reasons for and examples of how the procedures can detect a CFIT "trap"		
Recent and past CFIT incidents/accidents		
Audiovisual aids to illustrate CFIT traps		
Minimum altitude definitions for MORA, MOCA, MSA, MEA, etc		
You have a trained flight safety officer who rides the jump seat occasionally		
You have flight safety periodicals that describe and analyze CFIT incidents		
You have an incident/exceedance review and reporting program	20	
Your organization investigates every instance in which minimum		
terrain clearance has been compromised	20
